

EXFOLIATORS

G-S 5/2 Exfoliating Pads

These convenient pads facilitate exfoliating as a daily activity. This incredibly functional and easy to use pad is designed to whisk away dead skin cells, preventing them from clogging your pores and promoting cellular renewal. All that you must do is wipe the area using circular motions, the powerful formula containing glycolic / salicylic acid combo will do all the work to resurface, clarify, tighten and firm.

The daily ritual is intended to reduce the appearance of pores, fine lines, wrinkles, improving the skin's tone and texture and providing for a youthful glow.

DAILY APPLICATION

Use daily. If needed, gradually increase the frequency from one time per day to two or three times daily as directed by your physician. If extreme dryness or peeling occurs, reduce the application frequency to every other day.

DIRECTIONS

Apply on clean dry, skin. Wipe the affected area with a pad using circular motions. Do not rinse. Avoid contact with the eyes. Make sure to use sunscreen to protect your skin.

INGREDIENTS

Water, Alcohol denat, Glycolic Acid, Sodium Hydroxide, Salicylic Acid, Butylene Glycol, Hamamelis Virginiana (witch Hazel) Water, Polysorbate 20, Phenoxyethanol, Ethylhexylglycerin, Disodium EDTA

BENEFITS

- Reduce appearance of pore size
- Reduce the appearance of fine lines
- Improve the skin's tone, texture, and clarity
- No recovery time
- Keeps skin balanced and smooth

HOW IT WORKS

This presoaked pad contains glycolic and salicylic acid. Glycolic Acid is the smallest (alpha) - hydroxy acid with an excellent ability to penetrate skin pores. This makes it the perfect ingredient to remove excess oil, a common culprit for problematic skin. Glycolic Acid's exfoliating action helps remove dead cells from the epidermal layer without irritation or damage. It also helps stimulate the growth of new cells, to help rebuild a smoother and younger looking complexion. Removal of excess oil and dead skin cells provides a noticeable improvement of the skin's tone and texture, adding a rejuvenated look to your appearance.

Salicylic Acid is a Beta-Hydroxy Acid. Beta-Hydroxy Acids are oil-soluble & able to penetrate the skin pores, which contain sebum (skin oils). It dissolves and washes away the excess oils and exfoliates dead skin cells that are built up inside the pores. This makes it an optimal ingredient for cleansing the skin.
